

Web Design and Databases HTML and CSS Part 3

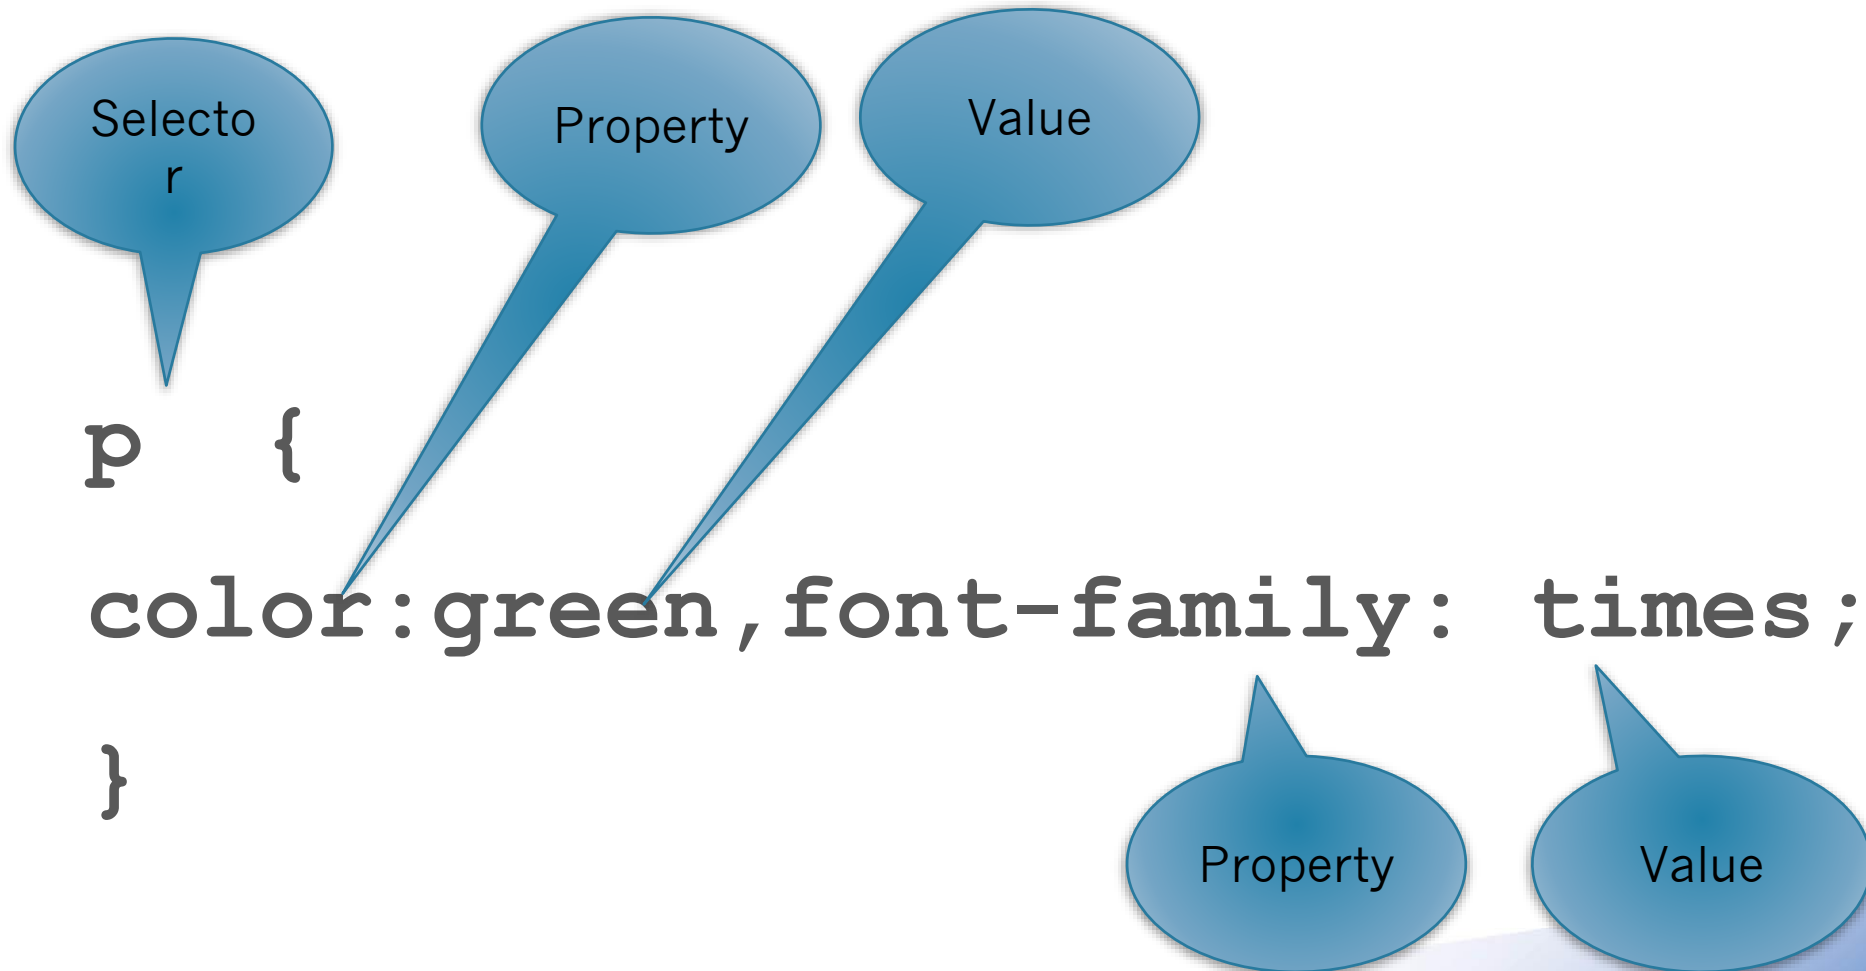

Talal Shaikh
Dept of Computer Science
Heriot-Watt University

Based on Slides from Helen Hastie

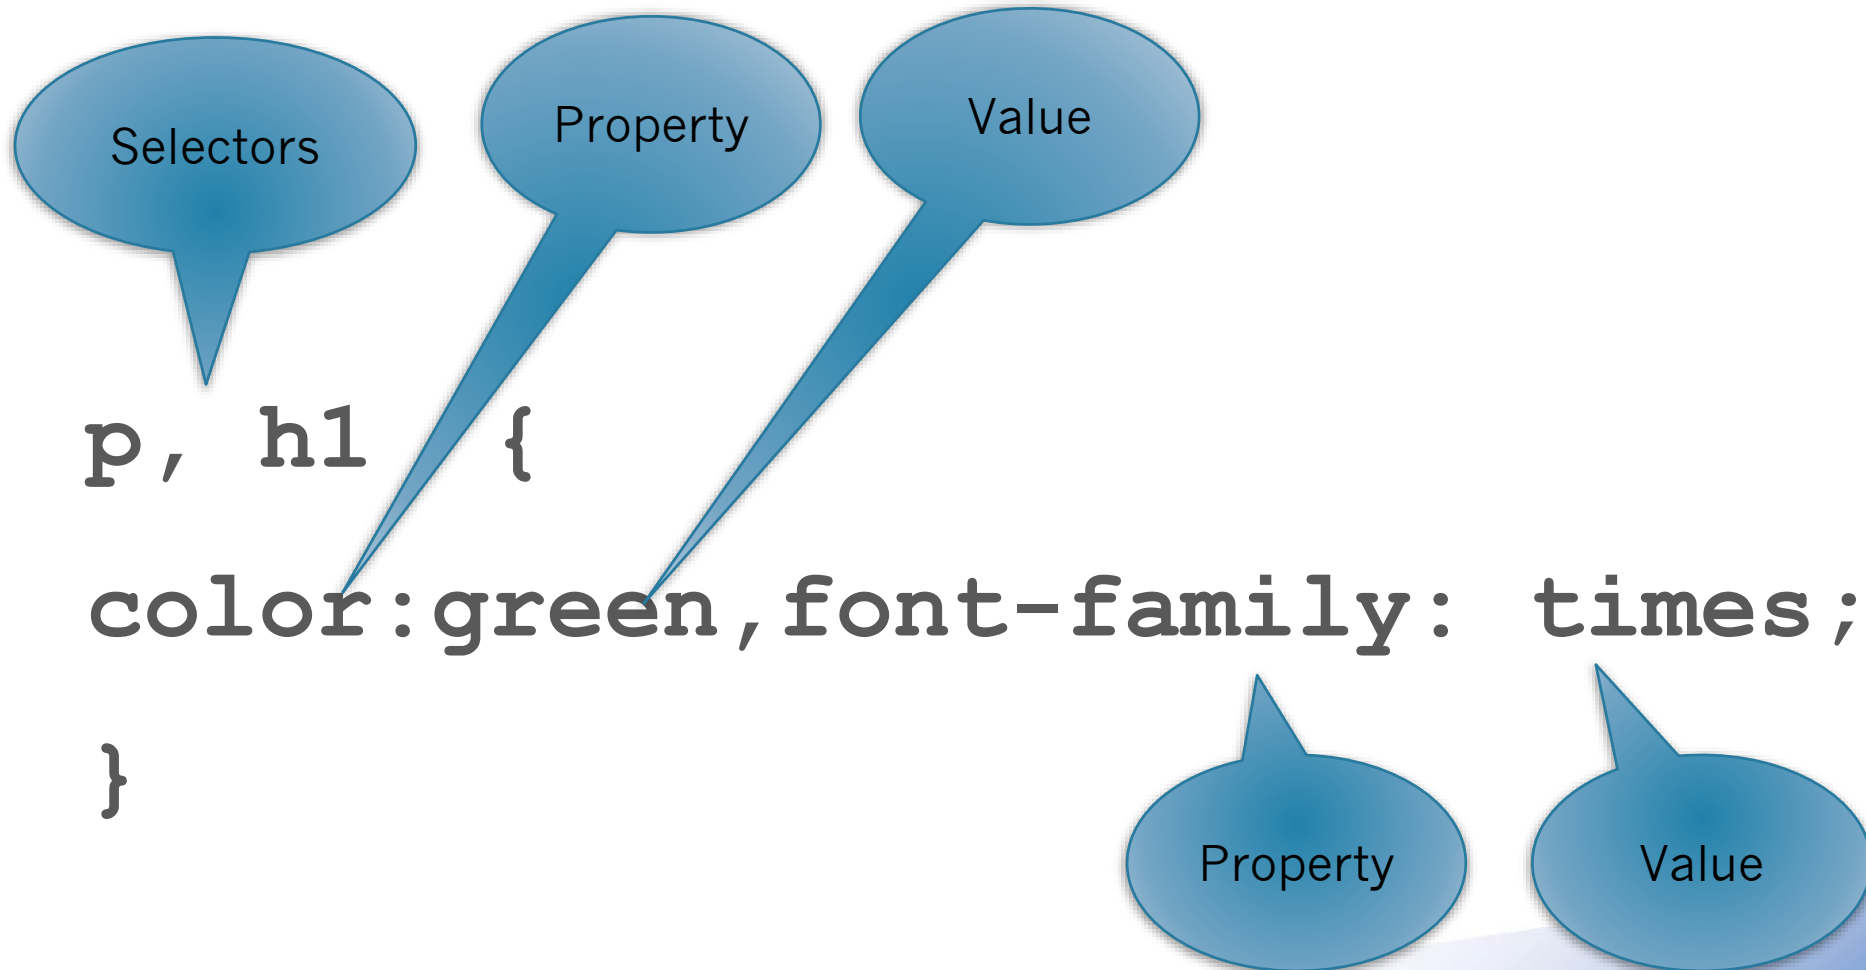

Recap

- HTML elements gives structure
- CSS adds style

CSS Rules

Can apply to more than one selector

Inheritance

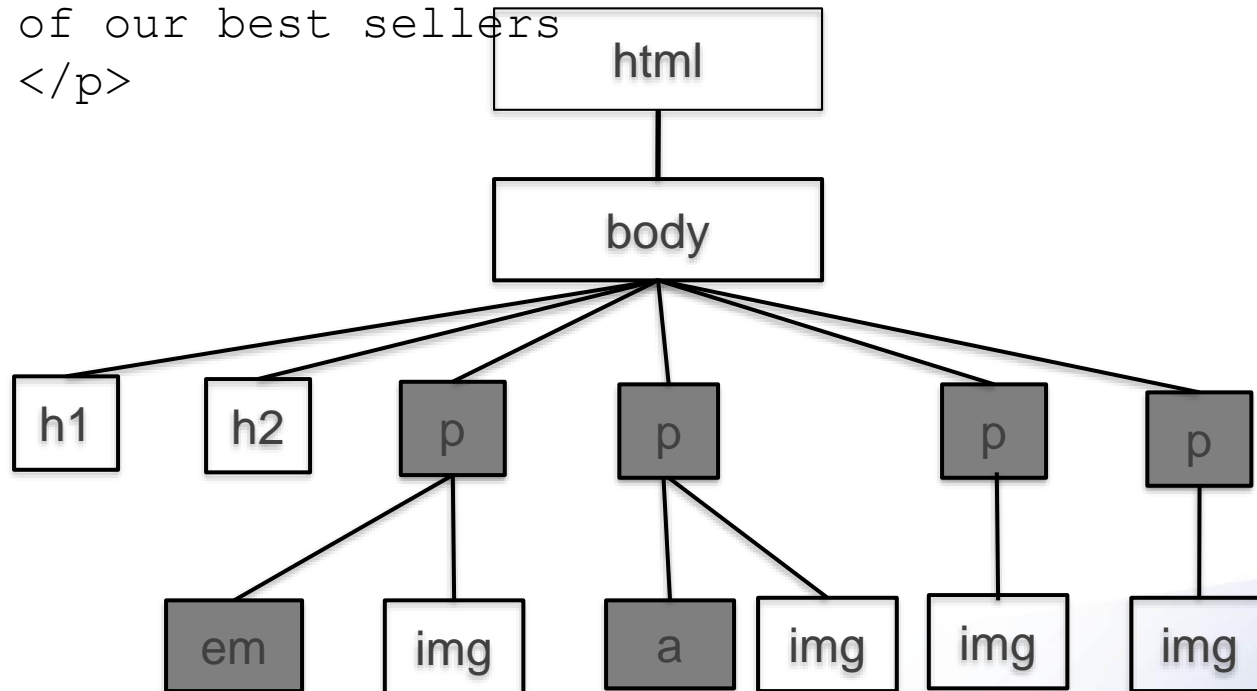

- Elements inside `<p>` inherit the properties of the `<p>`. For example:

`<p>`

```

```

```
Bursting with <em>zing</em>. Our lime lolly is  
one of our best sellers  
</p>
```

Adding a Class

```
<p class="lime">
```

```

```

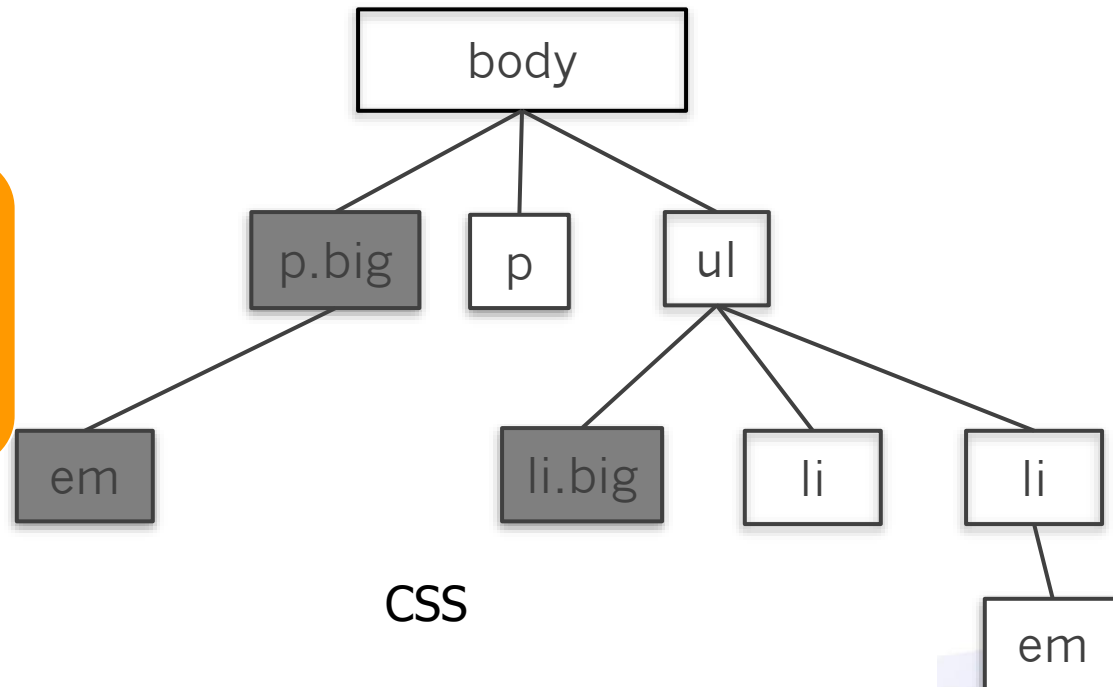

Bursting with `zine`. Our lime lolly is one of our best

```
</p>
```

```
body {  
  font-family: sans-serif;  
}  
h1, h2 {  
  color: gray;  
}  
h1 {  
  border-bottom: 1px solid black;  
}  
p {  
  color: maroon;  
}  
p.lime {  
  color: green;  
}
```

```
<body>
<p class="big">This is some <em>text</em></p>
<p>This is some text</p>
<ul>
<li class="big">List item</li>
<li>List item</li>
<li>List <em>item</em></li>
</ul>
</body>
```

p.big and li.big
*.big → .big

CSS

```
.big { font-size: 110%; font-weight: bold; }
```

Elements can be in more than one class

HTML

```
<p class="lime specials">
```

CSS

```
p.lime {  
    color: green;  
}  
p.specials {  
    font-family: serif;  
}
```

Elements can be in more than one class

What if all have the same property (e.g. color)? The last rule wins

```
<p class="lime strawberry orange  
swirl">
```

CSS

```
p.lime {  
    color: green;  
}  
p.strawberry {  
    color: pink;  
}  
p.orange {  
    color: orange;  
}  
p.swirl {  
    color: purple;  
}
```

Today : Adding structure

Trio Private Dining

For your special occasion, be it a birthday, christening or a gathering, the Trio team will design a bespoke menu reflecting your wishes within your budget

Any Night is Steak Night

Choose from a range of specially selected steaks, cooked to your liking. Includes French fries, button mushrooms, tomatoes and add a freshly prepared sauce

Sunday is Brunch Day

Have a day off cooking and let us do the work instead! Enjoy our all day breakfast menu with Specials - see chalkboard for details

Dividing Web pages into sections

h1
Welcome to mygamezzzz.com

h2
Xbox Games

p
Lorem ipsum dolor sit amet, facer moderatius
ullamcorper no nam, ex bonorum
elaboraret ius, ut ludus populo nec.

h2
PS4 Games

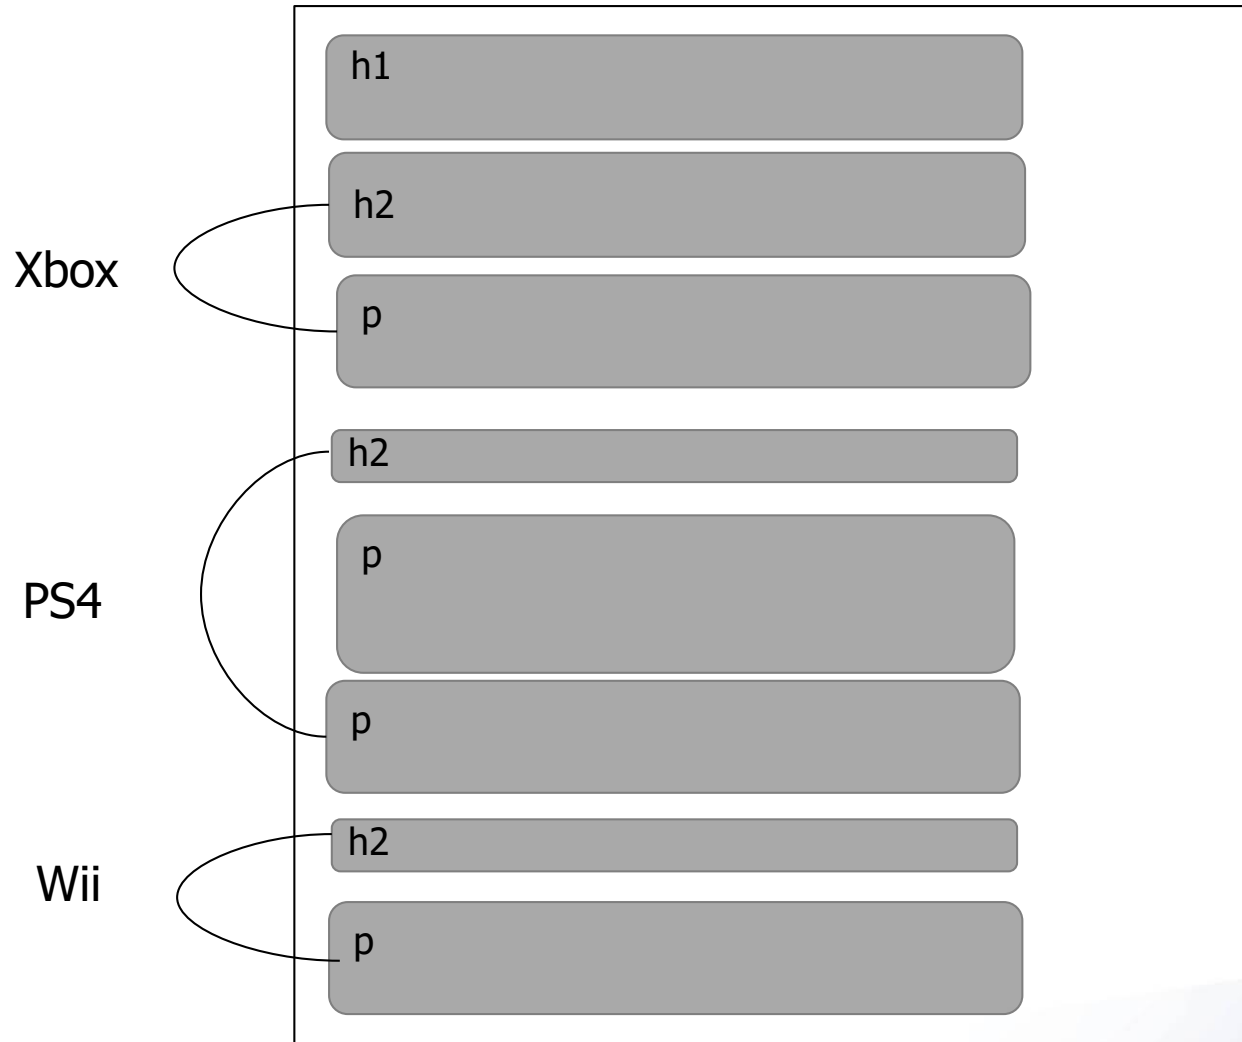

p
Lorem ipsum dolor sit amet, facer moderatius
ullamcorper no nam, ex bonorum
elaboraret ius, ut ludus populo nec.

p
Lorem ipsum dolor sit amet, facer moderatius
ullamcorper no nam.

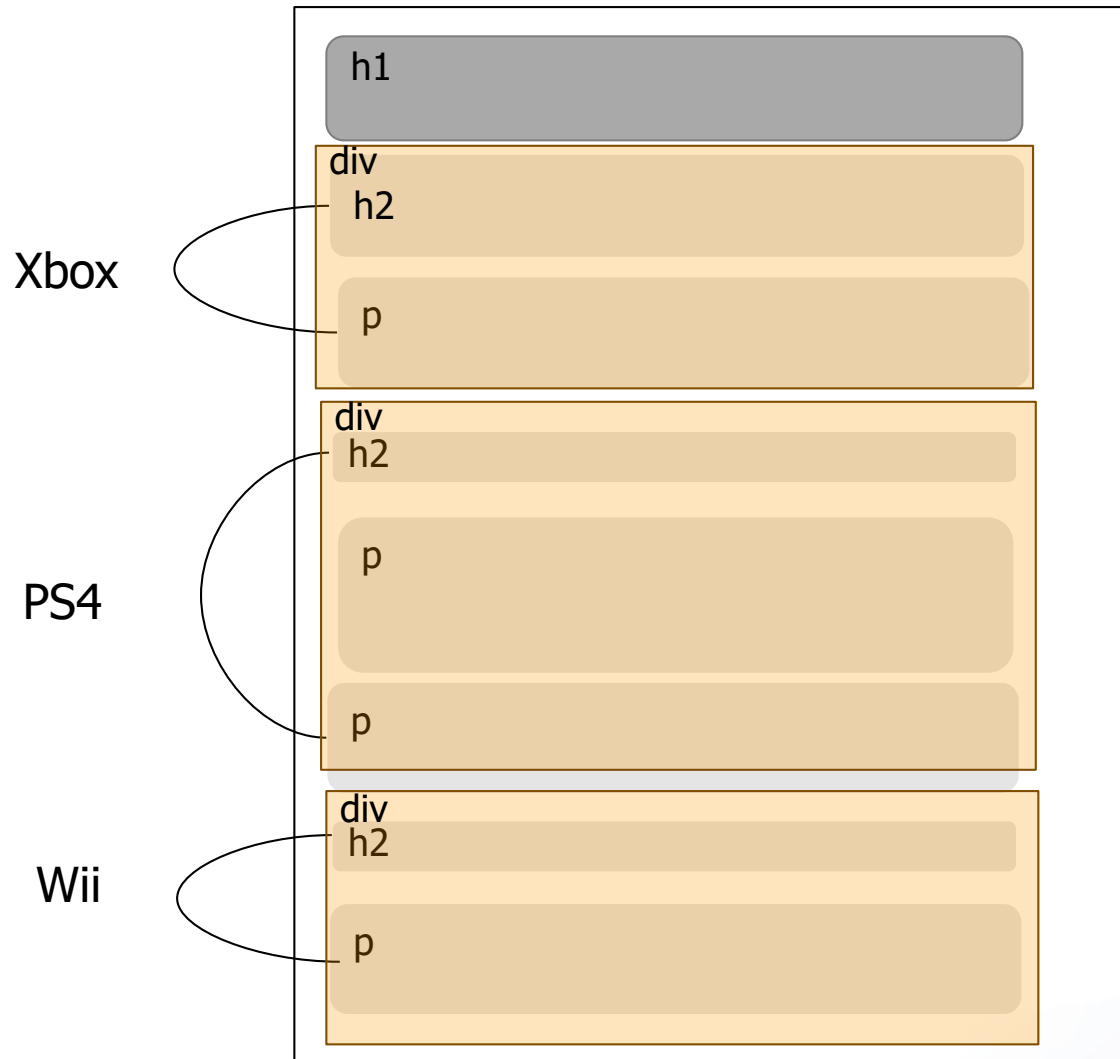

h2
Wii Games

p
Lorem ipsum dolor sit amet, facer moderatius
ullamcorper no nam.

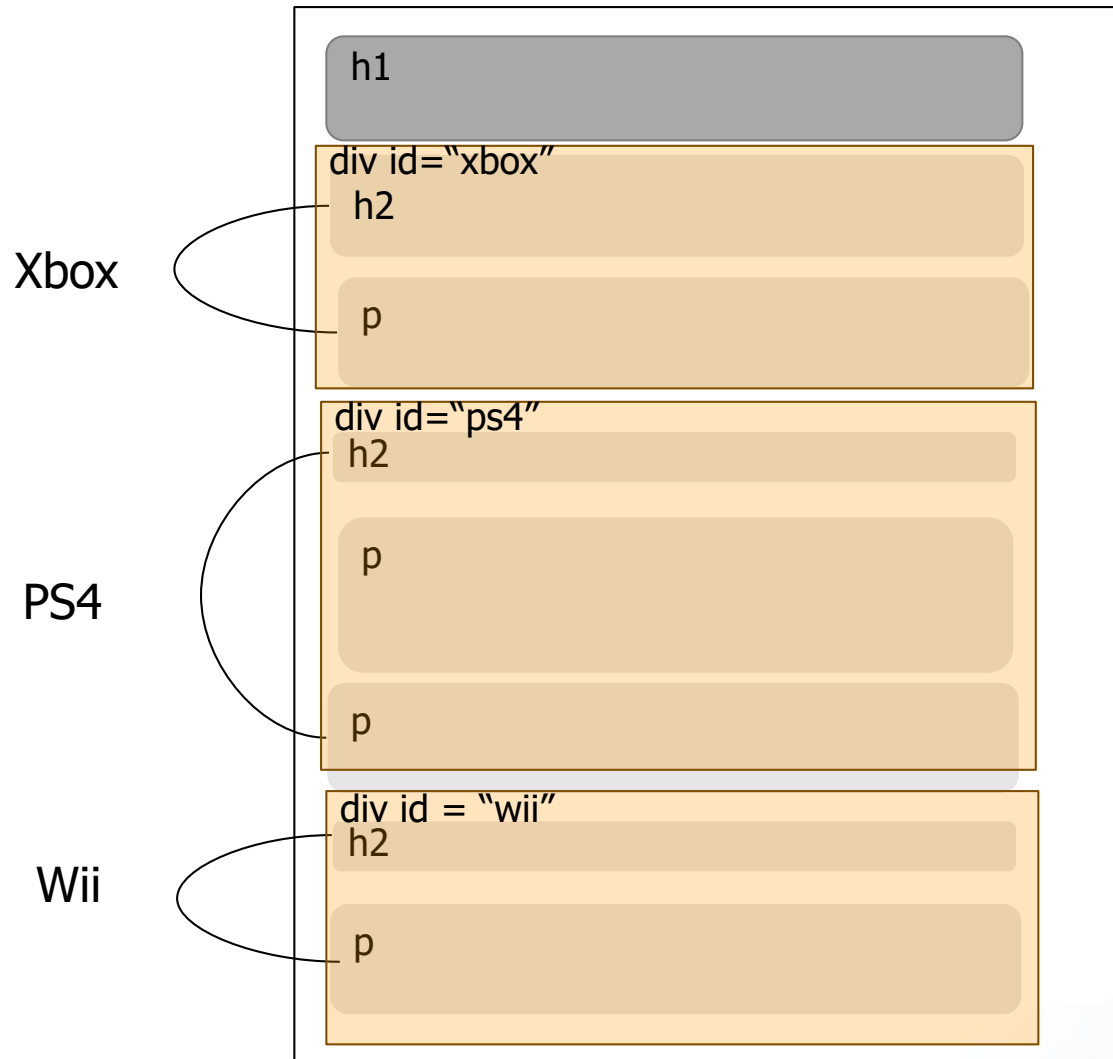

Dividing Web pages into sections

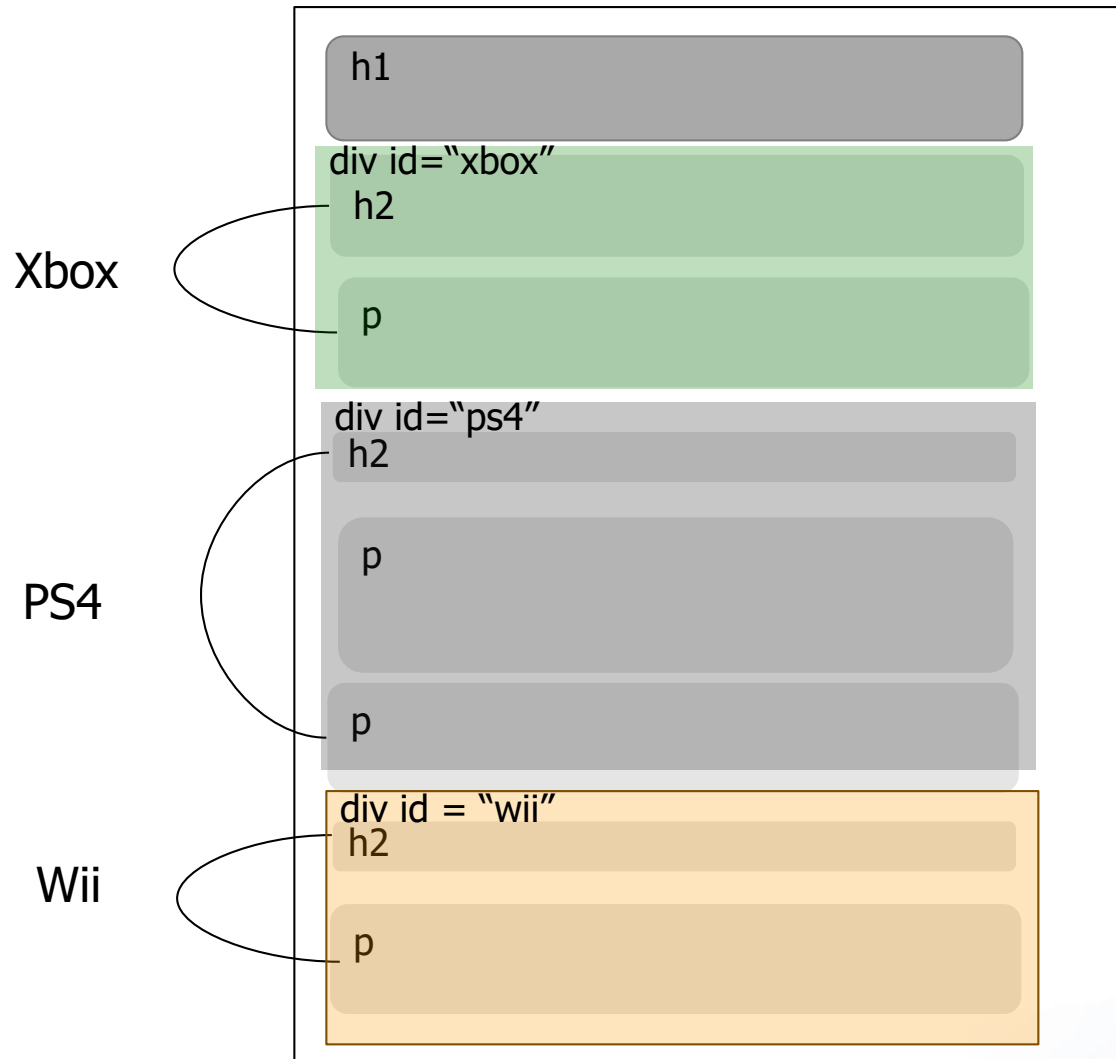

Using div to mark sections

Adding labels to the sections

Lets add some style

```
#xbox {
```

```
background-color: green;
}
```

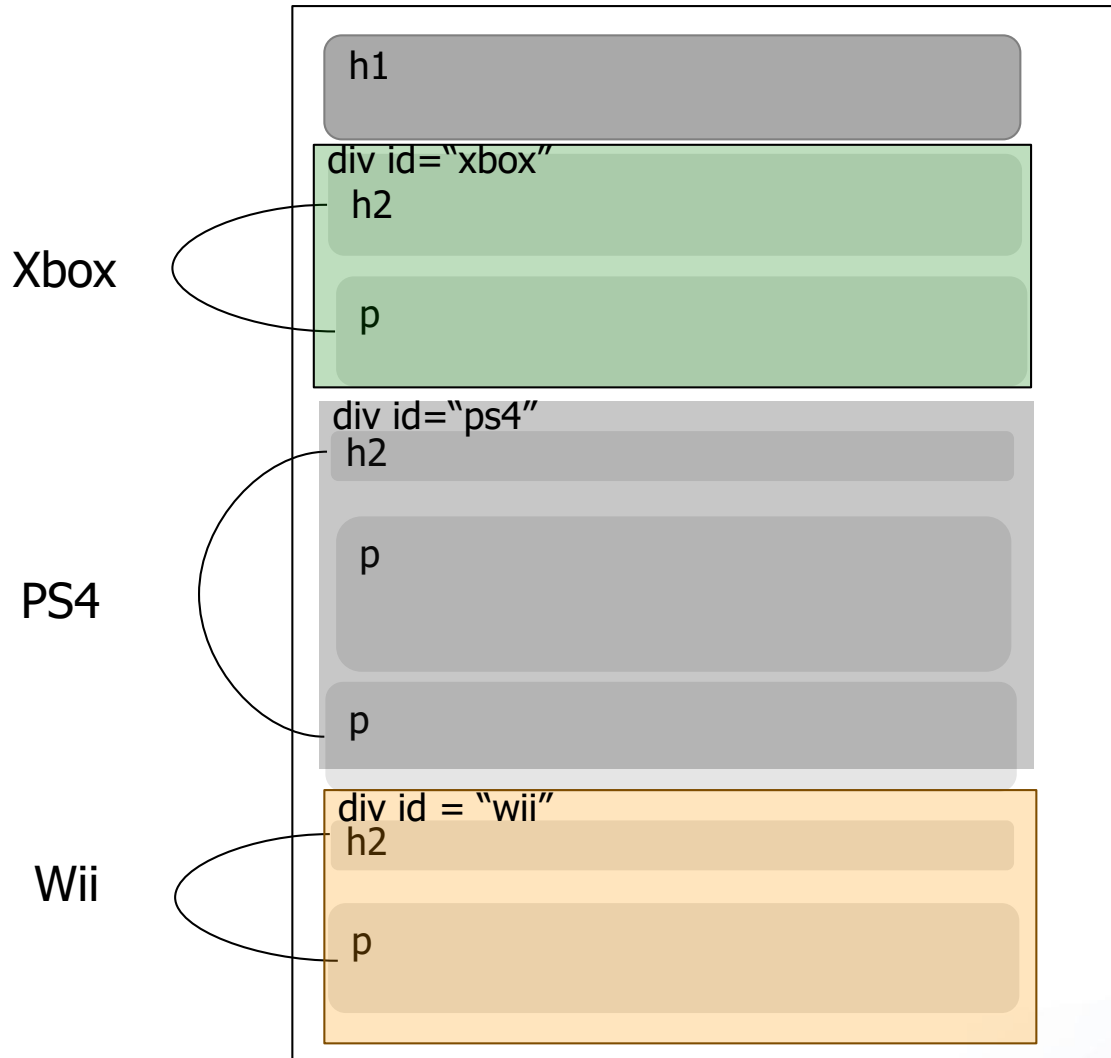

```
#ps4 {
```

```
background-color: black;
}
```

```
#wii {
```

```
background-color: orange;
}
```

Adding borders

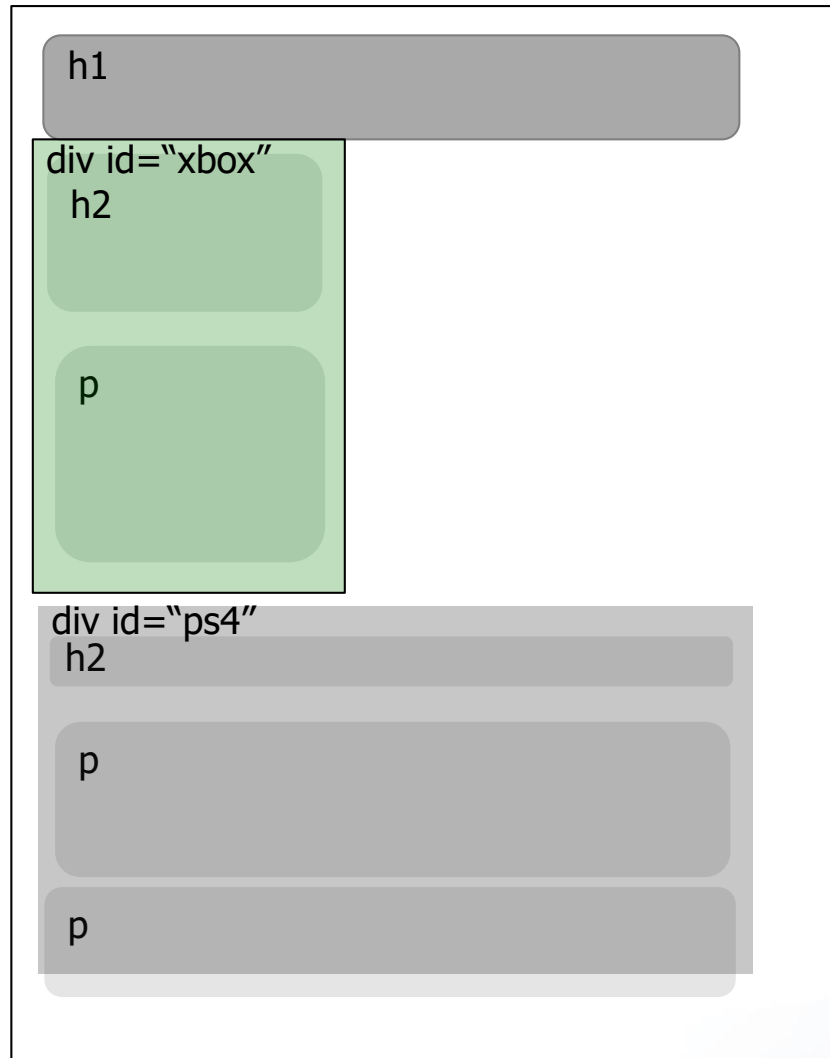

```
#xbox {
border-width: thin;
border-style: solid;
border-color: black;
background-color: green;
}
```

```
#ps4 {
background-color: black;
}
```

```
#wii {
background-color: orange;
}
```

Changing the width

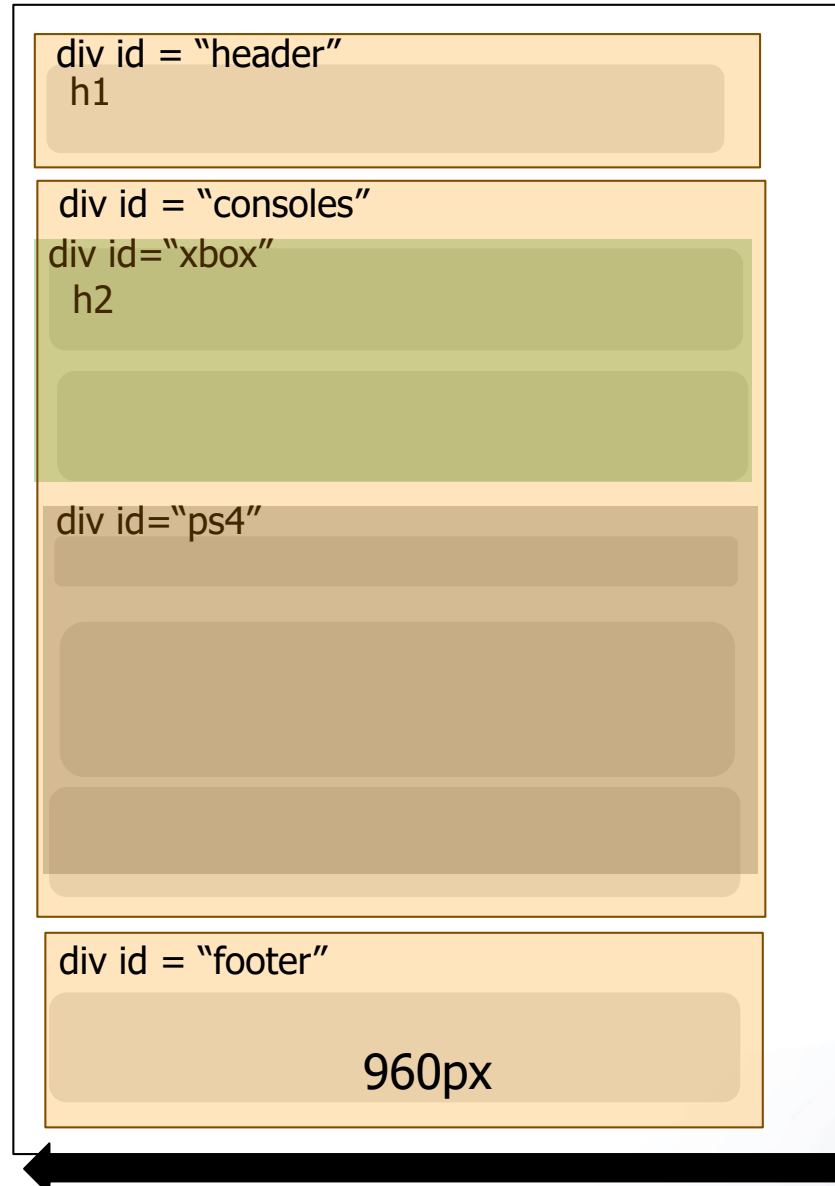

```
#xbox {  
border-width: thin;  
border-style: solid;  
border-color: black;  
background-color: green;  
width: 200px;  
}
```

```
#ps4 {  
  
background-color: black;  
}
```

```
#wii {  
  
background-color: orange;  
}
```

Adding structure on structure

Adding padding

With no padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

With padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

```
<!DOCTYPE html>
<html>
<head>
<style>
#xbox-nopadding {
border-width:thin;
border-style: solid;
border-color: black;
background-color: green;
}
```

```
#xbox-padding {
border-width:thin;
border-style: solid;
border-color: black;
background-color: green;
padding-top: 25px;
padding-right: 50px;
padding-bottom: 25px;
padding-left: 50px;
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div id="xbox-nopadding">
```

With no padding: Lorem Ipsum is simply

```
</div> <br>
```

```
<div id="xbox-padding">
```

With padding: Lorem Ipsum is.....

```
</div>
```

```
</div>
```

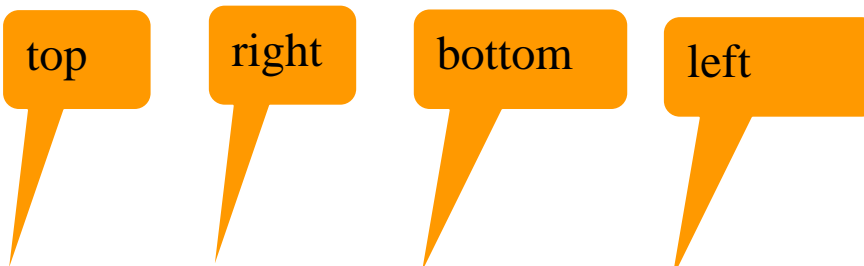

With no padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

With padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

Adding padding

Short cut

padding-top: 25px;
padding-right: 50px;
padding-bottom: 25px;
padding-left: 50px;

padding: 25px 50px 25px 50px;

The diagram illustrates the shorthand CSS property 'padding'. It shows the shorthand 'padding: 25px 50px 25px 50px;' with four orange callout boxes pointing to each value. The first value '25px' is labeled 'top', the second '50px' is labeled 'right', the third '25px' is labeled 'bottom', and the fourth '50px' is labeled 'left'.

Short cut borders

```
border-width: thin;  
border-style: solid;  
border-color: black;
```

They can be in any
order you like

```
border: thin solid black;
```

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
#xbox-nopadding {
```

```
border: thin solid black;
```

```
background-color: green;
```

```
}
```

```
#xbox-padding {
```

```
border: thin solid black;
```

```
background-color: green;
```

```
padding: 25px 50px 25px 50px;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div id="xbox-nopadding">
```

```
With no padding: Lorem Ipsum is simply ....
```

```
</div> <br>
```

```
<div id="xbox-padding">
```

```
With padding: Lorem Ipsum is.....
```

```
</div>
```

```
</div>
```

```
</body>
```

```
</html>
```

With no padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

With padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

Adding padding

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
#xbox-nopadding {  
border: thin solid black;  
background-color: green;  
}
```

```
#xbox-padding {  
border: thin solid black;  
background-color: green;  
padding: 25px 50px 25px 50px;
```

```
margin-left:100px;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div id="xbox-nopadding">
```

```
With no padding: Lorem Ipsum is simply ....
```

```
</div> <br>
```

```
<div id="xbox-padding">
```

```
With padding: Lorem Ipsum is.....
```

```
</div>
```

With no padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

←→
100px

With padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

Adding margins

Margin short cuts

margin-top: 25px;
margin-right: 50px;
margin-bottom: 25px;
margin-left: 50px;

top

right

bottom

left

margin: 25px 50px 25px 50px;

If all the same

```
margin-top: 20px;  
margin-right: 20px;  
margin-bottom: 20px;  
margin-left: 20px;
```

```
margin: 20px;
```

Works for padding too

If top and bottom are the same

margin-top: 0px;

margin-right: 20px;

margin-bottom: 0px;

margin-left: 20px;

Top and bottom

Right and left

margin: 0px 20px;

Works for padding too

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
#xbox-nopadding {  
border: thin solid black;  
background-color: green;  
}
```

```
#xbox-padding {  
border: thin solid black;  
background-color: green;  
padding: 25px 50px 25px 50px;  
margin-left: 100px;  
text-align: right;  
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div id="xbox-nopadding">
```

With no padding: Lorem Ipsum is simply

```
</div><br>
```

```
<div id="xbox-padding">
```

With padding: Lorem Ipsum is.....

With no padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

With padding: Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book.

Making the text
align within a div

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
#xbox-nopadding {  
border: thin solid black;  
background-color: green;  
}
```

```
#xbox-padding {  
border: thin solid black;  
background-color: green;  
padding: 25px 50px 25px 50px;  
width: 200px;  
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div id="xbox-nopadding">
```

```
With no padding: Lorem Ipsum is simply ....
```

```
</div> <br>
```

```
<div id="xbox-padding">
```

```
With padding: Lorem Ipsum is.....
```

```
</div>
```

```
</div>
```

```
</body>
```

With no padding: Lorem Ipsum is simply

With padding: Lorem Ipsum
is.....

Changing the
width of a div

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
#xbox-nopadding {
```

```
border: thin solid black;
```

```
background-color: green;
```

```
}
```

```
#xbox-padding {
```

```
border: thin solid black;
```

```
background-color: green;
```

```
padding: 25px 50px 25px 50px;
```

```
width: 200px;
```

```
float: right;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div id="xbox-nopadding">
```

```
With no padding: Lorem Ipsum is simply ....
```

```
</div> <br>
```

```
<div id="xbox-padding">
```

```
With padding: Lorem Ipsum is.....
```

```
</div>
```

```
</div>
```

With no padding: Lorem Ipsum is simply

With padding: Lorem Ipsum
is.....

Changing the
position with
float

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
#xbox-nopadding {
```

```
border: thin solid black;
```

```
background-color: green;
```

```
}
```

```
#xbox-padding {
```

```
border: thin solid black;
```

```
background-color: green;
```

```
padding: 25px 50px 25px 50px;
```

```
width: 200px;
```

```
position: absolute;
```

```
top: 100px;
```

```
right: 200px;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<div id="xbox-nopadding">
```

```
With no padding: Lorem Ipsum is simply ....
```

```
</div> <br>
```

```
<div id="xbox-padding">
```

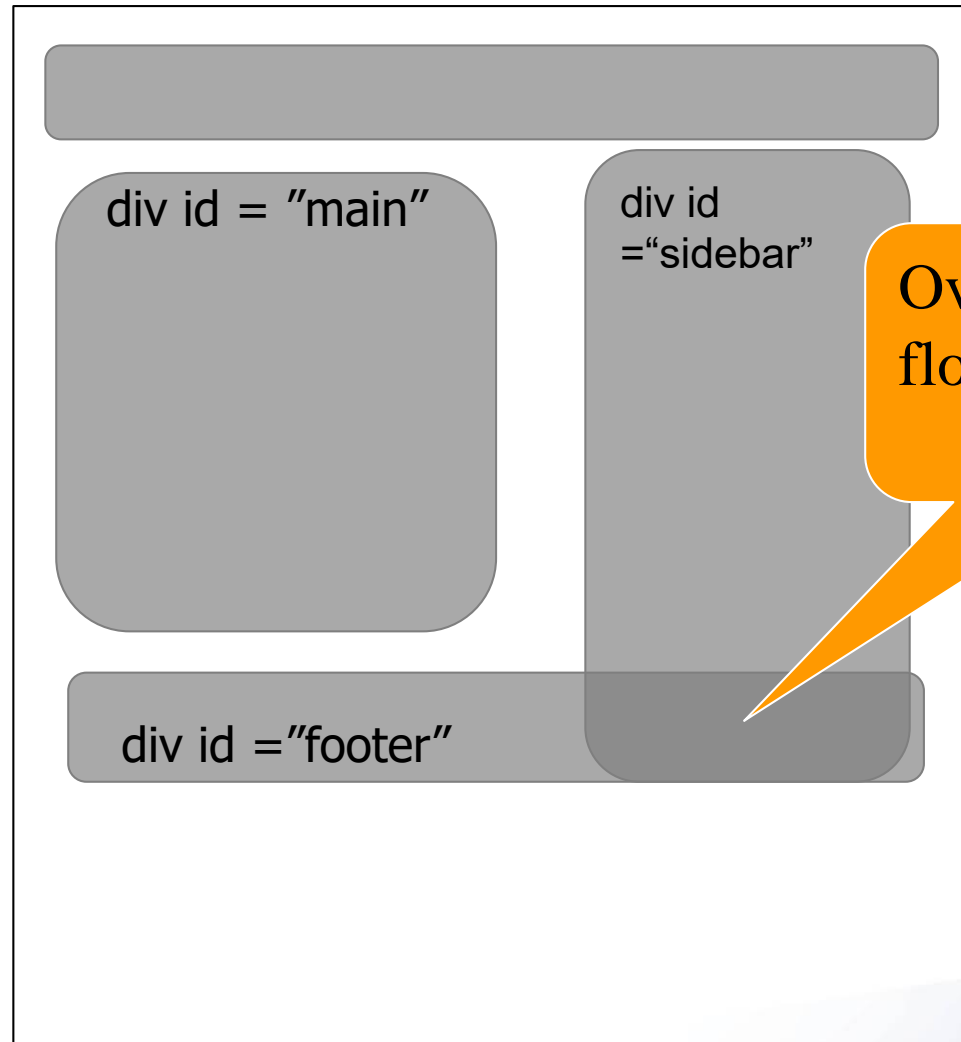

```
With padding: Lorem Ipsum is.....
```

With no padding: Lorem Ipsum is simply

With padding: Lorem Ipsum
is.....

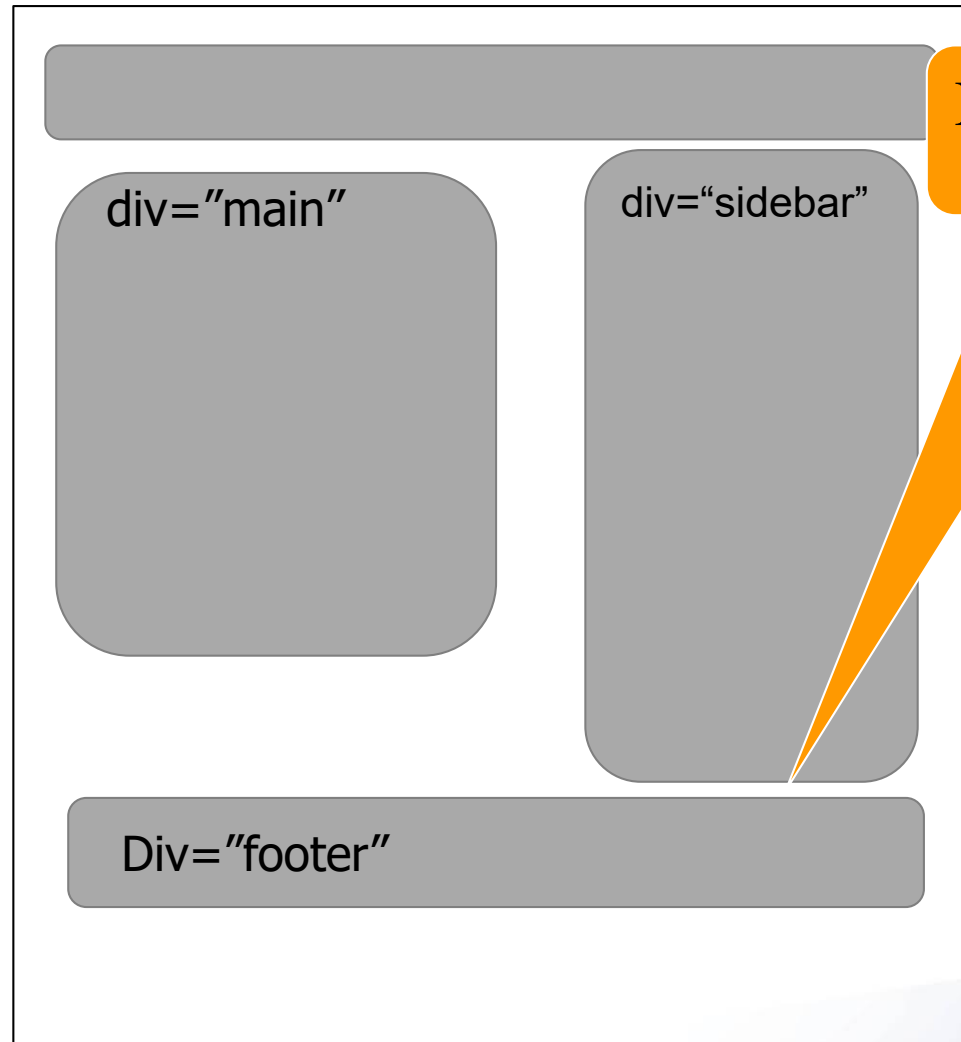

Changing the
position with
absolute position

Coping with overlap

Overlap with
floating sidebar

Coping with overlap

Better!

```
#footer{  
padding: 15px;  
margin: 10px;  
clear: right;  
}
```

Don't over do it

- Don't add `<div>`s unnecessarily.
- Adding structure for sections adds clarity and style
- Adding `<div>`s for the sake of it creates unnecessarily complicated structure

Short cut!

- Free div generators
 - E.g. <http://divoverlaylayouts.com/>

Div and inheritance

```
h1, h2 {  
  color: red;  
}
```

We want the div h2 to be different

Parent element

descendent

```
div h2 {  
    color: green;  
}
```

Rule: select any
h2 descendent
of *any* div

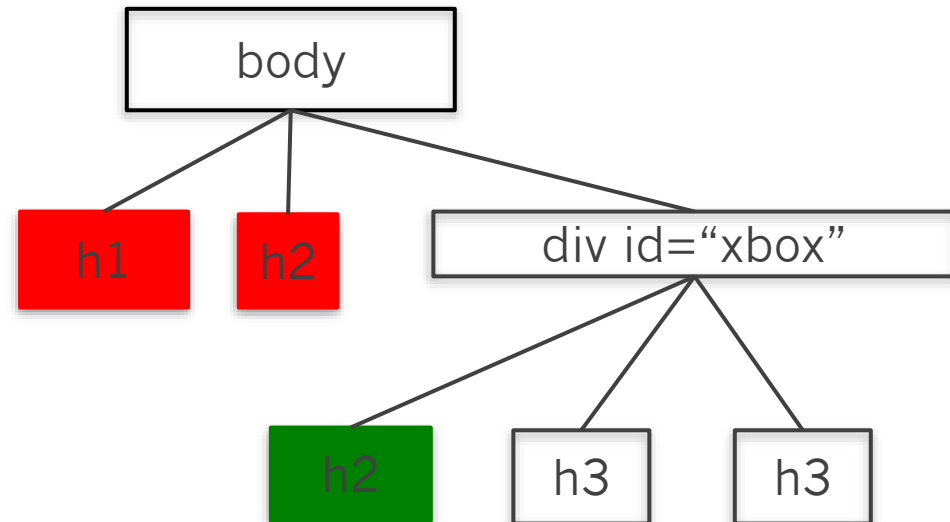

But we just want this for “xbox” div

Parent element

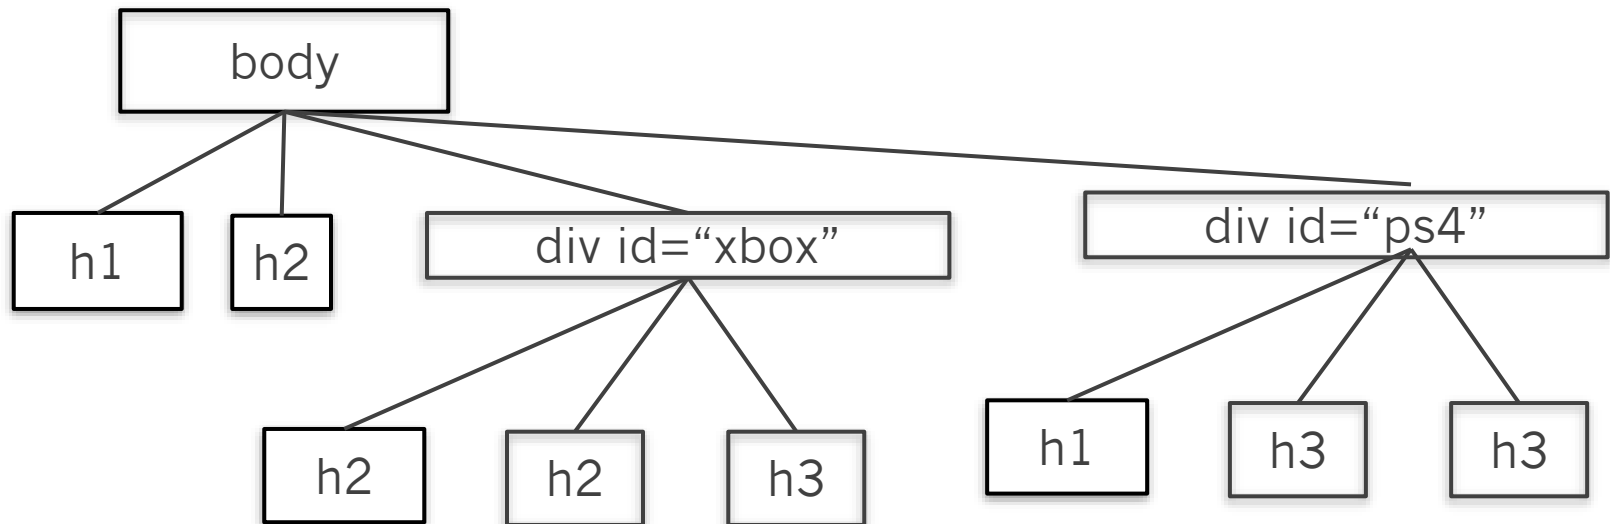

descendent

```
#xbox h2 {  
  color: green;  
}
```

Rule: select any
h2 descendent
of “xbox” div

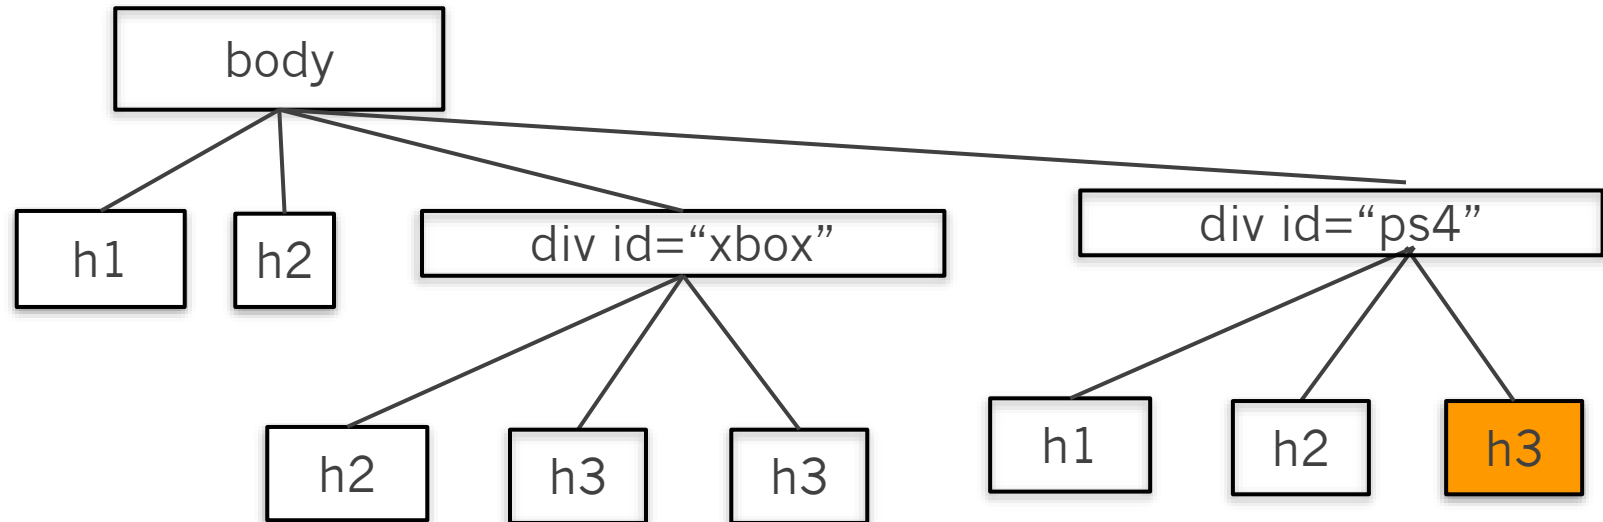

Now you try: write the selector that only selects `<h3>` elements inside the “ps4” and makes it orange

Now you try: write the selector that only selects `<h3>` elements inside the “ps4” and makes it orange

```
#ps4 h3 {  
    color: orange;  
}
```

Background colour

```
<!DOCTYPE html>
<html>
<head>
<style>
body {
  background-color: #a4f3f3;
}
</style>
</head>
<body>
```

```
<h1>Hello World!</h1>
<p> Learning about backgrounds</p>
```

```
</body>
</html>
```

Hello World!

Learning about backgrounds

Adding a picture

```
<!DOCTYPE html>
<html>
<head>
<style>
body {
  background-color: #a4f3f3;
  background-image: url("img_tree.png");
}
</style>
</head>
<body>

<h1>Hello World!</h1>
<p> Learning about backgrounds</p>

</body>
</html>
```

Background no-repeat

```
<!DOCTYPE html>
<html>
<head>
<style>
body {
    background-color: #a4f3f3;
    background-image: url("img_tree.png");
    background-repeat: no-repeat;
}
</style>
</head>
<body>

<h1>Hello World!</h1>
<p> Learning about backgrounds</p>

</body>
</html>
```

Background repeat-y

```
<!DOCTYPE html>
<html>
<head>
<style>
body {
  background-color: #a4f3f3;
  background-image: url("img_tree.png");
  background-repeat: repeat-y;
}
</style>
</head>
<body>

<h1>Hello World!</h1>
<p> Learning about backgrounds</p>

</body>
</html>
```

Background repeat-x

```
<!DOCTYPE html>
<html>
<head>
<style>
body {
    background-color: #a4f3f3;
    background-image: url("img_tree.png");
    background-repeat: repeat-x;
}
</style>
</head>
<body>

<h1>Hello World!</h1>
<p> Learning about backgrounds</p>

</body>
</html>
```

Background position

```
<!DOCTYPE html>
<html>
<head>
<style>
body {
    background-color: #a4f3f3;
    background-image: url("img_tree.png");
    background-repeat: no-repeat;
    background-position: right top;
}
</style>
</head>
<body>

<h1>Hello World!</h1>
<p> Learning about backgrounds</p>

</body>
</html>
```

Hello World!

Learning about backgrounds

Shortcut: background

```
<!DOCTYPE html>
<html>

Font short cuts

Ordering matters!

```
<!DOCTYPE html>
<html>
<head>
<style>
p.ex1 {
    font: 15px arial, sans-serif;
}

p.ex2 {
    font: italic bold 12px/30px Georgia, serif;
}
</style>
</head>
<body>

<p class="ex1">This is a paragraph..</p>
<p class="ex2">This is a paragraph. This is a
paragraph. This is a paragraph.</p>

</body>
</html>
```

This is a paragraph..

This is a paragraph. This is a paragraph. This is a paragraph.

Span

- The `` tag provides a way to add a hook to a part of a text or a part of a document.
- `` doesn't change the text in anyway
- Let's you add style certain parts of the text for example

Example

```
<!DOCTYPE html>
<html>
<head>
<style>
body{
background-color: #a4f3f3;
}
</style>
</head>
<body>
<p> Xboxes have green boxes. Wiis have white boxes.</p>
</body>
</html>
```

Xboxes have green boxes. Wiis have white boxes.

Adding spans- nothing happens

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
body{
```

```
background-color: #a4f3f3;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<p> Xboxes have <span> green </span> boxes. Wiis have <span> white  
</span> boxes.</p></body>
```

```
</html>
```

Xboxes have green boxes. Wiis have white boxes.

Adding spans with class- still nothing happens

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
body{
```

```
background-color: #a4f3f3;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<p> Xboxes have <span class="xbox"> green </span> boxes. Wiis have  
<span class="wii"> white </span> boxes.</p></body>
```

```
</html>
```

Xboxes have green boxes. Wiis have white boxes.

Adding style to a span class

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
body{
```

```
background-color: #a4f3f3;
```

```
}
```

```
.xbox {
```

```
color: green;
```

```
}
```

```
.wii {
```

```
color: white
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<p> Xboxes have <span class="xbox"> green </span> boxes. Wiis have <span  
class="wii"> white </span> boxes.</p>
```

```
</body>
```

```
</html>
```

Xboxes have green boxes. Wiis have white boxes.

Or add style directly to class

Xboxes have green boxes. Wiis have white boxes.

```
<!DOCTYPE html>
<html>
<head>
<style>
body{
background-color: #a4f3f3;
}
</style>
</head>
<body>
<p> Xboxes have <span style="color:green"> green </span> boxes. Wiis
have <span style="color:white"> white </span> boxes.</p>
</body>
</html>
```

That's all fine and good

- but.....HTML5 has some other tricks up it's sleeve to make things even clearer

`<div id="header">`

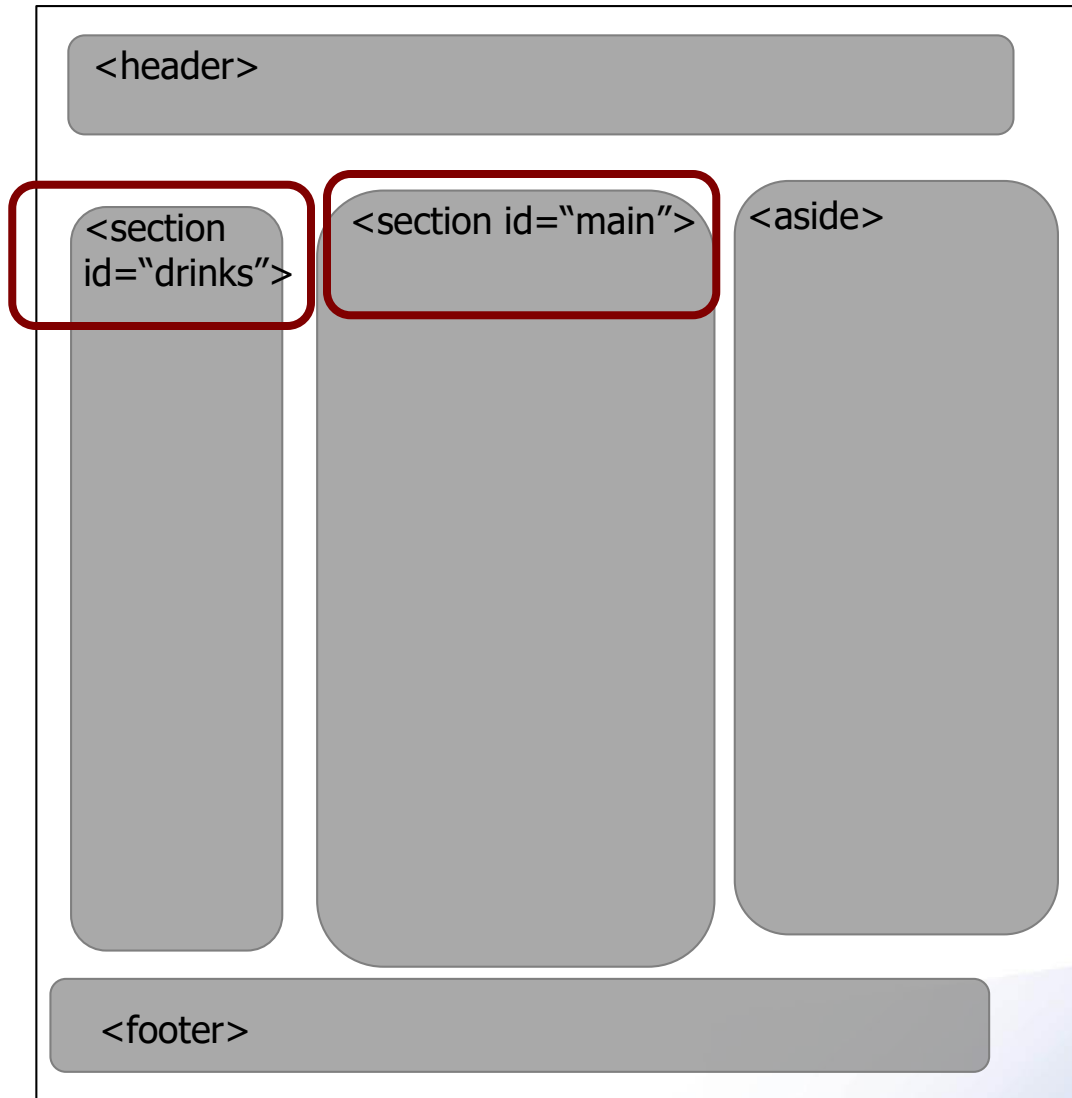

`<div
id="drinks">`

`<div id="main">`

`<div id="sidebar">`

`<div id="footer">`

<section>

Pardon me?

- I thought we'd been learning about `<div>`
- What's the difference between `<div>` and `<section>`?

<section> vs <div>

- <section> marks a block of content that belongs to the same *semantic* category.
- Rule of thumb- would the content be listed in a table of contents?
- Yes- then it's <section>

What about poor old <div>?

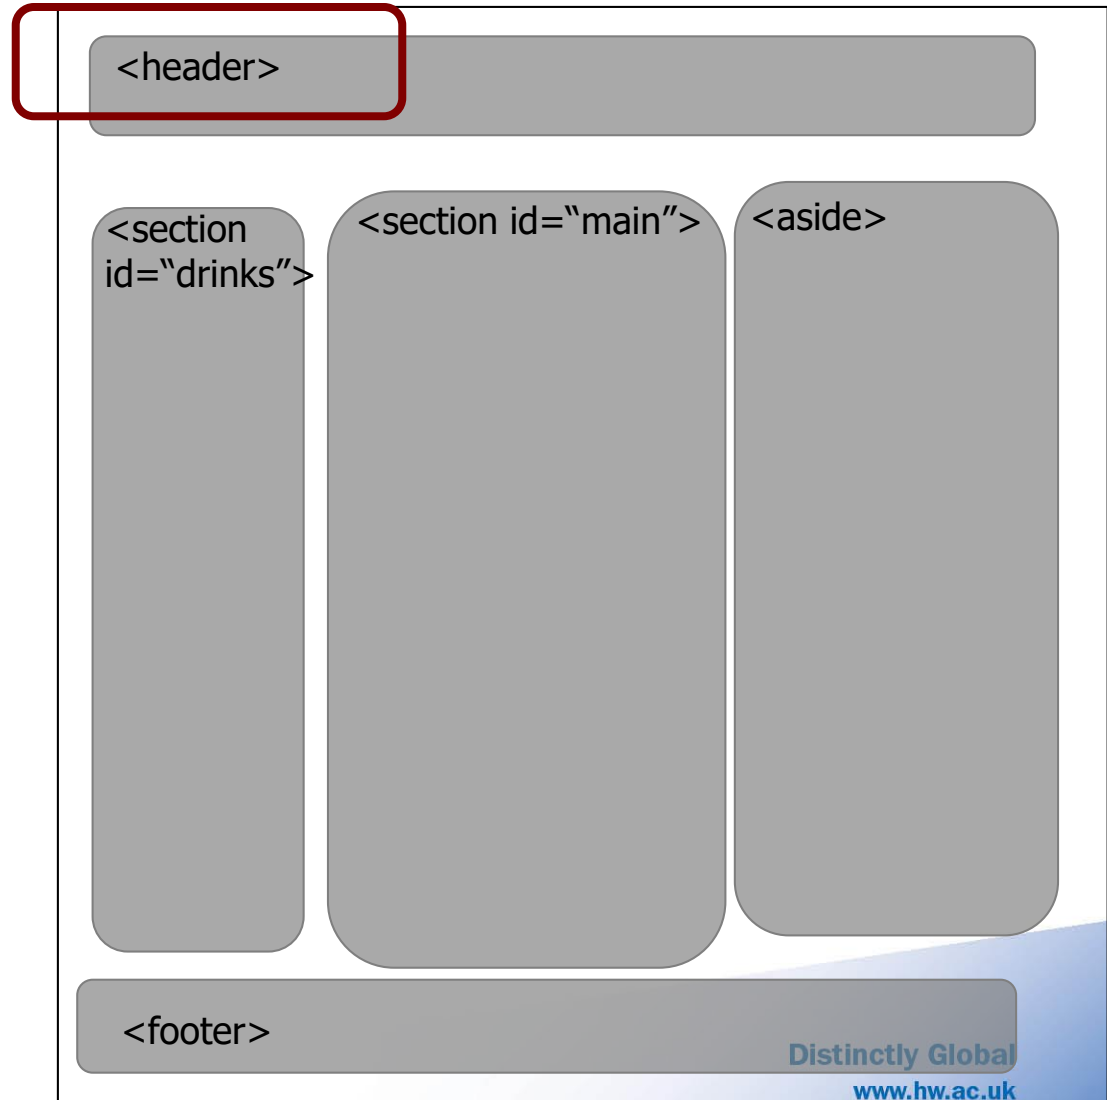

- We can still use this but the <div> classes don't capture any particular meaning- they can be arbitrary
- div = used to capture structure and feature inheritance
- div = a generic container element
- div= used for styling purposes or as a convenience for scripting

<header>

<div id="header">

now <header>

Used for logo and
utilities

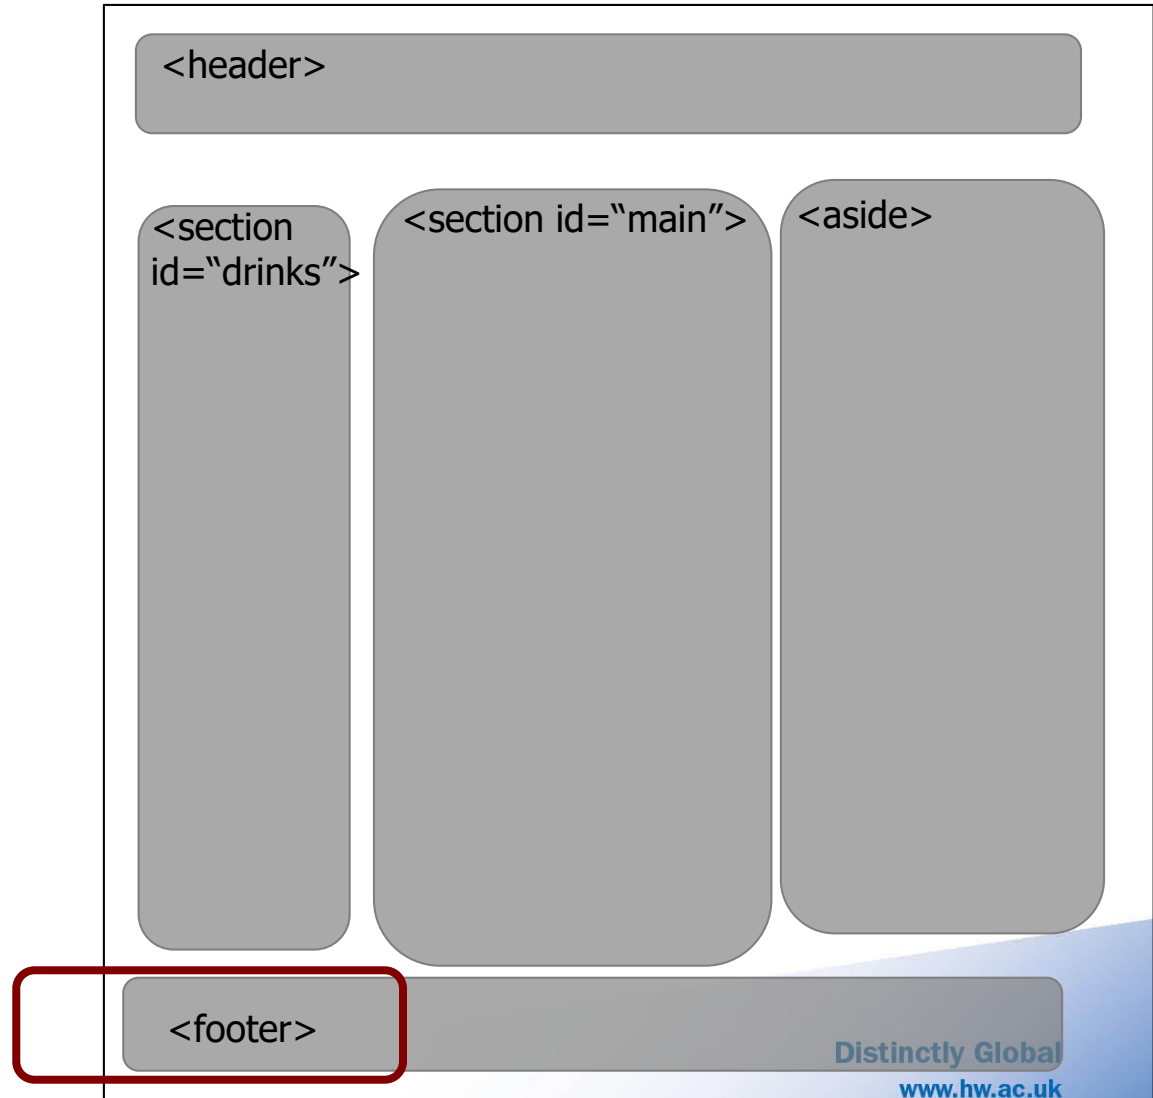

<footer>

<div id="footer">

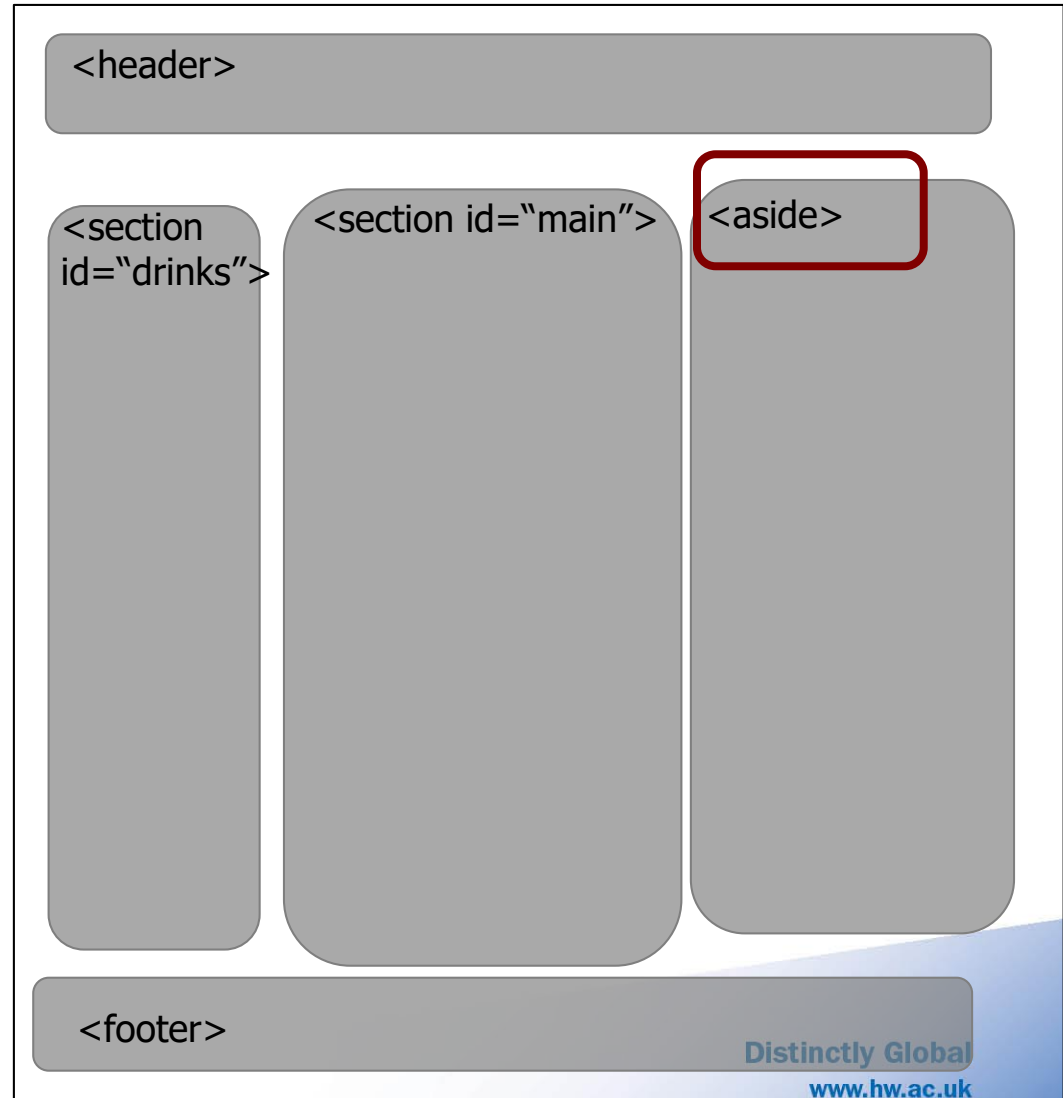

Now <footer>

Used for boring legal
stuff

<aside>

<div id="sidebar">
now <aside>
content- *aside* from the
content it is placed in.
Used for sidebars.

<nav>

Navigation = list of links

Put just under <header>

```
<nav>
```

```
<ul>
```

```
  <li> <a href = "index.html"> Home </a>
```

```
  <li> <a href = "directions.html"> Directions </a>
```

```
  <li> <a href = "contact.html"> Contact us </a>
```

```
</ul>
```

```
</nav>
```

- [Home](#)
- [Directions](#)
- [Contact us](#)

Vertical <nav>

But with the bullets and margins and paddings removed

```
ul {  
    list-style-type: none;  
    margin: 0;  
    padding: 0;  
}
```

[Home](#)
[Directions](#)
[Contact us](#)

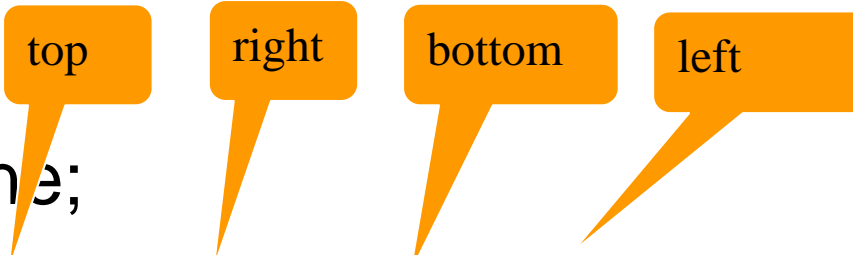

Horizontal <nav>

```
li {  
    display: inline;  
}
```

[Home](#) [Directions](#) [Contact us](#)

Now let's spread them out

```
li {  
  display: inline;  
  padding: 10px 10px 5px 10px;  
}
```

For more about <nav>

- [http://www.w3schools.com/css/css_navbar.as
p](http://www.w3schools.com/css/css_navbar.asp)

Summary

- Divs allow structure
- Span allow styling of in-line parts of the website
- Font
- HTML5 has element names w/r structure to capture the semantic content of the websites (<header>, <footer>, <section>, <nav>)

Resources

- Use the websites you've worked on in the lab
- Use templates from here:
